

# Installation Instructions Model 53560/53561/53562/53563

## RGB LED Controller for DigiRibbon

### 53560/53561/53562/53563

### **Features**

Integral IC chip that allows for individual operatio each diode

Endless modes can be created including chasing Over 300' of run without additional signal amplific DMX interface with optional controller Can be controlled by lphone/lpad/lpod ETL approved for damp locations Field cuttable every 4 inches

Input voltage: DC 12V

Input signal: single line digital signal

LED type: SMD 5050 RGB LED Qty: 150pcs/5m

Maximum power consumption: 36W (5m)

Control IC: TM1803 Grey scale: 256

### **Applications**

Cove and toe kick accent lighting

Discos and clubs

Store front displays

Recreation rooms

Game and theater rooms

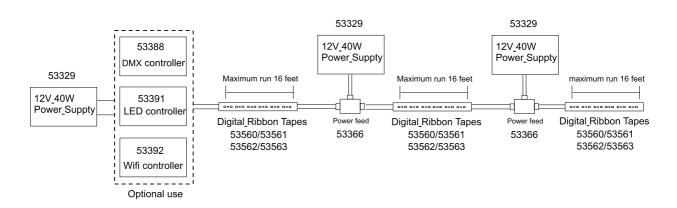

# Installation Instructions Model 53560/53561/53562/53563

### **Dimensions** (Unit:mm/inch)

#### **Control Mode**

TM1803 adopt the return-to-zero code single line controlling method as below. If you want more technical support, please contact us.

### **Operation Guide**

- Connect the connector of the strip to the output of the controller, then electrify the controller.
- When connect more than one strips, connect the input of the additional strip to the last output, and electrify this additional strip with another DC12V power supply. Please note that you should electrify the controller before all strips is well connected.
- If you want to do bare-line connection, please watch the color of the wires, wires with same color should be bonded and insulated with tape.

#### Note

- 1. Watch the input and output, it can not be reverse-connected.
- 2. Ensure the power supply is DC12V.
- 3. Only professional electrician is advised to cut and connect the strip, Please red in instruction before operate.
